Influenza virus hemagylutinin-specific antibodies isolated
from a combinatorial expression library are closely relat
to the immune response of the donor.

In some cases, such as IgA and IgM, the subunits associate into larger

Title: >US-08-836-455-1_1
Description: (89-97) from trans.pep (3 of 3)
Perfect Score: 54
Sequence: 1 SDYSLTISS 9

Scoring table: PAM 150
Gap 11
Searched: 74019 seqs, 2684029

arched: 74019 segs, 26840295 residues

Post-processing: Minimum Match 0% Listing first 45 summaries

Database: swiss-prot35 1:swissprot

Statistics: Mean 22.743; Variance 22.907; scale 0.993

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

MPsrch_pp protein - protein database search, using Smith-Waterman algorithm

bular output not generated. on: Tue Apr 20 14:07:44 1999; MasPar time 4.19 Seconds """ 106.989 Million cell updates/sec

Description: Perfect Score: Sequence: Title: >US-08-836-455-1_1 (89-97) from trans.pep (3 of 3) 54 1 SDYSLTISS 9

Scoring table: PAM 150 Gap 11

Searched: 165420 seqs, 49795644 residues

Post-processing: Minimum Match 0% Listing first 45 summaries

Database:

1:sp_archea 2:sp_bacteria 3:sp_fungi 4:sp_human 5:sp_invertebrate 6:sp_mammal 7:sp_mhc 8:sp_organelle 9:sp_bhage 10:sp_plant 11:sp_rodent 12:sp_unclassified 13:sp_vertebrate 14:sp_virus

Mean 21.822; Variance 24.944; scale 0.875

Statistics:

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

T04626 encodes R80079 mouse derived light chain RT3 phage
The DNA was used in the prepn. of catalytic antibody (CA)
bacteriophage. The CAs can be used to activate/deactivate
biological function in an animal by enhancing the rate of
or formation of a specific bond within a mol. in vivo.

                                                                                                                                                                                                               CC variable region (without signal sequence). Cloned cDNA CDR sequences of constant framework regions of the REI antibody for the light chain and ct the 2*CL antibody for the heavy chain in the construction of a humanized constitution of a humanized constant framework regions of the REI antibody for the heavy chain in the construction of a humanized contibody against VIA-4. The 5' and 3' ends of the mouse cDNAs are condified using PCR primers (See Q99895-98) and then subcloned into manufalian cell expression vectors containing human kappa or gamma-1 constant regions. In the humanized light chain, amino acids L45, L49, CL58 and L69 in the human kappa LCVR framework are replaced by the amino cald present in the equivalent position of the mouse 21.6 Ig light chain. CC Plasmids encoding the chimeric antibodies are transfected into COS cells. The humanized antibodies can be used to inhibit adhesion of a leukocyte to an endothelial cell and to treat inflammatory diseases such as cerebral traumas, meningitis or encephalitis. The antibodies can also be used for detecting VIA-4, for affinity purification or for generating canti-idiotype antibodies.

Example 2: Fig 26c; 130pp: English.

This polypeptide sequence comprises a consensus sequence of murine light chain variable regions (VL) selected on the basis of identity to the VL region (see W27119) of monoclonal anti-idiotype antibody 11D10. The sequences were obtained from a GenBank database search. A VH consensus (W27122) was also produced. 11D10 has at least 18 departures from the consensus sequences (7 in the light chain and 11 in the heavy chain). 8 Occur within CDRs and 10 outside CDRs. 11D10 polypeptides and polynucleotides can be used in vaccines and pharmaceutical compositions for the treatment of human milk fat globule-associated diseases such as breast
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Monoclonal

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Monoclonal antibodies against LPS core epitope(s) of Gram-negative bacteria - for diagnosing, preventing and treating Gram-negative bacterial infections Claim 23; Page 56 + 43; 82pp; English.

Monoclonal antibodies which recognise an epitope in the core region of the bacterial lipopolysaccharide (LPS) mol. and which are crossofthe bacterial lipopolysaccharide (LPS) mol. and which are crossofthe bacterial strains having different core structures, pref. comprise the heavy chain variable domain having the sequence of R27497 (WNI 222-5) or R27500 (WNI 58-9).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Query Match

Claim 6; Pages 30-31; Slpp; Japanese.

The present sequence is the light chain variable region of the murine anti-human Fas ligand (Fast) monoclonal antibody (MAb) NOKI, which is expressed by the hybridoma NOKI (FERM BP-5044). The MAb can be used in the preparation of a composition for the effective oral or parenteral treatment of hepatitis, including hepatitis caused by hepatitis B or C virus. The composition controls apoptosis in liver cells caused by the binding of Fast to Fas expressing liver cells, and improves liver function by improving blood glutamate oxaloacetate and pyruvate transaminase levels. The composition is given in a dosage of 0.0001-1000, preferably 0.01-600 mg/day. Spleen cells from mice immunised with Fast expressing COS cells were fused with mouse myeloma cells to produce hybridomas. The composition of the active clones NOKI-5 isolated.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Matches

Example 21; Fig 24; 209pp; English.

The VK sequence is one of seven (R21286-92) found to be expressed from a single chain Fv library from an immunised mouse. The library from a single chain Fv library from an immunised mouse. The library ry produces a diverse repertoire of antibody fragments specific for 2-phenyl-5-oxazolone (phox). It was prepd. using cDNA generated from mRNA from mice immunised with phox coupled to chicked serum albumin. The VH and VL kappa sequences were separately amplified by PCR (see 023470-84) and ligated into fdCAT2 (see 023463) for expression on the phage surface as fusions with gene III. The resulting library of clones was diverse. Twenty three hapten binding clones were sequenced revealing eight different VR genes (A-H) (see R21264-71) in a variety of pairings with the seven different VR genes (a-g). Of the twenty three clones sequenced, three were of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Matches

The antibody recognises the beta 1 subunit (CD29) of integrins and inhibits activation and proliferation of peripheral T cells induced by anti-CD3 antibodies. Monoclonal antibody K20 is a preferred target for humanisation; the humanisation may be useful as an immunosuppressant. In the humanisation process, the complementarity determining regions (CDRs) of a human antibody with framework regions 70-95% homologous to those of K20 were replaced by the K20
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   binding_site
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence

PT detection of infectious prion proteins or for treating disease such PT as BSE, CJD or scraple
PS Example 9; Fig 6; 99pp; English.

CC W18366-W18285 represent portions of the antibodies of the invention. The CC antibodies of the invention are able to bind the scraple isoform of prion protein prp-Sc in situ. Prions are infectious pathogens that cause CC central nervous system spongiform encephalopathies in humans and animals. CC The scrapie isoform of the prion protein (prp-Sc) is necessary for both the transmission and pathogenesis of the transmissible neurodegenerative CC diseases of animals and humans. The antibodies can be used in a method of the invention for detecting human Prp-Sc in a source. The antibodies specifically bind to prion proteins associated with disease and do not bind to denatured Prp proteins not associated with disease. They can bind to prion proteins of aspecific species of mammals. They can also have the ability to neutralise infectious prions. The antibodies can be used CC for screening for the presence of prions in products such as cc pharmaceuticals, food or cosmetics. They can also be used for prion
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Query Match

(See Berek et al, Nature 316 412-418, 1985). They contain the DXGXX motif in CDR3, the central Gly of which is needed to create a cavity for phox. Most of the clones were Vk-d combinations. The Kd of VH-B/Vk-d for phox-GABA was 10 nM. Only two other combinations (of eleven tested) were found to have higher values. This suggests that phage bearing scFv fragments having weak affinities can be selected with antigen, probably due to the avidity of the multiple antibody heads on the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          09-JAN-1998 (first entry)

T asthma, atherosclerosis, AIDS, dementia, etc.

Claim 18; Page 68; 107pp; English.

C This polypeptide comprises the light chain variable region (VL) of mouse anti-alpha-4 integrin monoclonal antibody 21.6. The complementarity determining regions (CDRs) of the 21.6 VL can be incorporated into a human REI framework to produce a claimed humanised 21.6 VL (see W22412) and a claimed humanised 21.6 vL can be cantibody that is used in the manufacture of a medicament for treating a disease selected from asthma, atherosclerosis, AIDS, dementia, diabetes, inflammatory bowel disease, rheumatoid arthritis, transplant rejection, graft versus host disease, tumou metastasis, nephritis, atopic dermatitis, psoriasis, myocardial
                                                                                                                                                                                                                                                             29-MAY-1997.

Provided to human reshaped antibody 21.6 light CC The sequence represents the human reshaped antibody 21.6 light CC Chain variable region against leukocyte adhesion molecule VLA-4. CC Cloned cDNA sequences of mouse 21.6 VL (99889) and VH (99892) CC regions are linked to human constant regions in the construction of a humanized antibody against VLA-4. The 5' and 3' ends of the CC them subcloned into mammalian cell expression vectors containing then subcloned into mammalian cell expression vectors containing CC human kappa or gamma-1 constant regions. In the humanized light CC chain, amino acids L45, L49, L58 and L69 in the humanized light CC framework are replaced by the amino acid present in the equivalent CC framework are replaced by the amino acid present in the equivalent CC position of the mouse 21.6 Ig L chain. Plasmids encoding the chimeric antibodies are transfected into CCS cells. The humanized can be used to inhibit adhesion of a leukocyte to an altibodies can be used to inhibit adhesion of a leukocyte to an stroke, cerebral traumas, meningitis or encephalitis. The contibodies can also be used in the treatment of stroke, cerebral traumas, meningitis or encephalitis. The contibodies can also be used for detecting VLA-4, for affinity contification or for generating anti-clair-trauman-anti-clair-trauman-anti-clair-trauman-anti-clair-trauman-anti-clair-trauman-anti-clair-trauman-anti-clair-trauman-anti-clair-trauman-anti-clair-trauman-anti-clair-trauman-anti-clair-trauman-anti-clair-trauman-anti-clair-trauman-anti-clair-trauman-anti-clair-trauman-anti-clair-trauman-anti-clair-trauman-anti-clair-trauman-anti-clair-trauman-anti-clair-trauman-anti-clair-trauman-anti-clair-trauman-anti-clair-trauman-anti-clair-trauman-anti-clair-trauman-anti-clair-trauman-anti-clair-trauman-anti-clair-trauman-anti-clair-trauman-anti-clair-trauman-anti-clair-trauman-anti-clair-trauman-anti-clair-trauman-anti-clair-trauman-anti-clair-trauman-anti-clair-trauman-anti-clair-trauman-anti-clair-trauman-anti-cla

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                region
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ischaemia, and acute leukocyte mediated·lung injury. The antibody may also be used in the affinity purification of alpha-4 integrin for use as a vaccine or an immunogen. It is also useful for generating idiotypic antibodies. The humanised antibodies of the invention have a half-life in the human circulation essentially equivalent to that of naturally occurring human antibodies. Sequence 126 AA;

                                                                              The sequence represents the mouse antibody 21.6 light chain variable region directed against leukocyte adhesion molecule VLA-4. Cloned CDNA sequences of mouse 21.6 VL and VH (see Q9992) regions are included to human constant regions in the construction of a humanized antibody against VLA-4. The 5' and 3' ends of the mouse cDNAs are modified using PCR primers (See Q9985-98) and then subcloned into mammalian cell expression vectors containing human kappa or gamma-1 constant regions. In the humanized light chain, amino acids 145, 149, L58 and L69 in the human kappa LC VR framework are replaced by the amino acid present in the equivalent position of the mouse 21.6 Ig L chain. Plasmids encoding the chimeric antibodies are transfected into COS cells. The humanized antibodies can be used to inhibit adhesion of a leukocyte to an endothelial cell and to treat inflammatory diseases such as multiple sclerosis. They can also be used in the treatment of stroke, creebral traumas, meningitis or encephalitis. The antibodies can also be used for affinity purification or for generating anti-idioture antibodies.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Ş

Disclosure; Fig 13; 108pp; English. ---
The mouse VL gene product may be used to produce chimeric mouse-human Abs against HIV-1 comprising human Ig constant regions and murine variable regions. These novel sequence are useful in treatment, diagnosis and prophylaxis of HIV infections, and may be produced by a bacterial, yeast or mammalian expression system.

A monoclonal antibody which reacts only with the alphav chain of human alphav integrins; which blocks attachment of alphav integrin bearing cells to integrin substrate; which reverses established cell matrix interactions caused by alphav integrin; which blocks tumour development and which has no cytotoxic activity, may be used to treat tumours, especially melanoma (but also glioma, carcinoma) optionally coupled to a cytokine such as interleukin-2. The monoclonal antibody may also be used for diagnostic imaging of tumours and assesment of tumour growth when conjugated to a radiolabel or a radio opaque-agent.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Mean 17.008; Variance 14.078; scale 1.208

                                                                                                                                                                                                                                       This chain was isolated from a myeloma protein that binds inulin. An immunoglobulin heterotetramer subunit consists of two identical light (kappa or lambda) and two identical heavy (alpha, delta, epsilon, gamma, or mu) chains usually stabilized by interchain disulfide bonds. In some cases,

This chain was isolated from a myeloma protein that binds inulin.
An immunoglobulin heterotetramer subunit consists of two identical light (kappa or lambda) and two identical heavy (alpha, delta, epsilon, gamma, or mu) chains usually stabilized by interchain disulfide bonds. In some cases, such as IgA and IgM, the subunits associate into larger
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   similarity 100.0%;

MPsrch_pp protein - protein database search, using Smith-Waterman algorithm

Tabular output not generated. n on: Tue Apr 20 13:54:52 1999; MasPar time 2.29 Seconds 58.693 Million cell updates/sec

Title: Description: Perfect Score: Sequence: >US-08-836-455-2 (31-35) from US08836455.pep (1 of 3) 28 LSASL 5

Scoring table: PAM 150 Gap 11

Post-processing: Minimum Match 0% Listing first 45 summaries Searched: 74019 seqs, 26840295 residues

Database: swiss-prot35 1:swissprot

Statistics: Mean 17.476; Variance 12.170; scale 1.436

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
